

# Assignment 3

WEB Frontend elective 2019

In this individual assignment your job is to design a webpage using Bootstrap and Sass. You may choose any subject you want, make up your own content or redesign an existing webpage and its content. Whatever you choose, it's essential that you keep your code well-organized.

You are already familiar with the fundamental 3-level-structure of CSS:

```
selector {property: value;}
```

In this assignment, you are not allowed to repeat any values! Use **variables** and **mixins** instead.

Other requirements:

- The stylesheet(s) must be divided into small logical components using **Sass-partials** and **@import**
- The webpage must contain at least **5 Bootstrap components**
- There must be at least **2 Sass-mixins** in use
- There must be at least **2 Sass-functions** in use
- The look and feel must be **aesthetically pleasing** for the human eye

Handin the assignment as a single PDF-file on Moodle consisting of your full name and two links:

1. Link to an online version of your webpage
2. Link to a Github repository containing all your well-organized and DRY code

Give the pdf-file your own name (e.g. "morten-rolid.pdf"). An approved assignment gives you 25 study points.

**Deadline is April 11 at 23:59.**
